FLOW-TEK FLANGED SERIES

1 PIECE FLANGED STANDARD PORT 1" - 12" RF15 - ASME CLASS 150 | RF30 - ASME CLASS 300

THE HIGH PERFORMANCE COMPANY

RF15/RF30 FLANGED SERIES BALL VALVES

Flow-Tek's Series RF15 and RF30 Ball Valves feature a compact, one piece body design with threaded insert. The one piece body supplies maximum structural strength while minimizing the number of potential leak paths. A floating ball design offers low torque and increases valve cycle life. These rugged, economical, end entry flanged ball valves are ideal for industrial applications.

STEM SEALS

Series RF15/RF30 1"- 2" valves feature live-loaded, self- adjusting primary and secondary sealing. Utilizing belleville washers, the stem seal automatically adjusts to compensate for changes in temperature and normal wear. 3"- 12" valves utilize an independent packing gland which can be easily adjusted without removing mounting hardware or operator. The packing gland is contoured to more uniformly distribute the load across the packing.

The primary seal is a combination of a thrust washer and thrust washer protector. An adjustable stem packing creates a secondary seal between the stem and body. The stem packing is composed of RPTFE V-rings as standard – graphite stem packing is standard on all Fire Safe valves.

BALL

Flow-Tek balls are precision machined and mirror finished for bubble-tight shut off and less operating torque. As an added safety feature, a hole in the stem slot of each ball equalizes pressure between the body cavity and the line media flow.

BODY

1"-4" valve bodies are investment cast and all valve size castings are solution annealed/normalized for the highest quality and added strength. All body castings are marked with a foundry heat number for full traceability.

SEAT

Flow-Tek's seat design ensures bi-directional, bubbletight sealing with low operating torque. All resilient seats feature positive preloading to ensure low pressure/vacuum sealing.

ANTI-STATIC DEVICES

All RF15/RF30 valves have Anti-Static Devices as standard. These devices positively ground ball and stem.

Body	1 Piece
Reduced Port	1" through 12"
Materials	Stainless Steel, Carbon Steel & Special Alloys
essure Ratings	RF15: ASME Class 150 RF30: ASME Class 300

LOCKING DEVICE

Pr

All manually operated valves feature a locking device to prevent accidental movement of ball position.

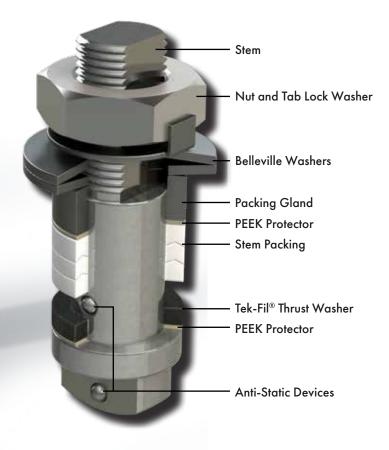

SECURE MOUNT

Series RF15/RF30 valves offer ease of automation due to an integrally cast actuator mounting pad that complies with ISO 5211 through 2" valve sizes.

STEM ASSEMBLIES

Flow-Tek manufactures heavy duty, high quality stems with double "D" connection to ball and operator mounting. Stem and ball design ensure positive contact. All Flow-Tek stems are internal entry and blowout proof for maximum safety.

RF15/RF30 OPTIONS

- V-Control Valves
- Safety Exhaust
- Upsteam or Downstream Venting
- Tri-Port Balls
- Self Draining
- Steam Jackets
- Media Containment units

additional options are available upon request

SMART STEM Valve Sizes up to 2"

Flow-Tek's Interchangeable Family of valves feature strong, large diameter stems with live-loaded, self-adjusting sealing utilizing belleville washers which automatically adjust to compensate for changes in temperature and wear. Manual adjustments which can cause damage to the seal and seat are not required. The assembly is secured by a saddle-type lock washer which prevents stem nuts from unthreading in high cycle automation applications.

STEM PACKING

An adjustable V-ring design creates a multiple seal between the stem and body. Each stem assembly is composed of three or four (dependent on valve size) rings providing a very high cycle life by resisting creep and cold flow. The Thrust Washer and the Thrust Washer Protector combine to provide a primary seal, reduce torque and prevent galling. This arrangement is a Flow-Tek exclusive.

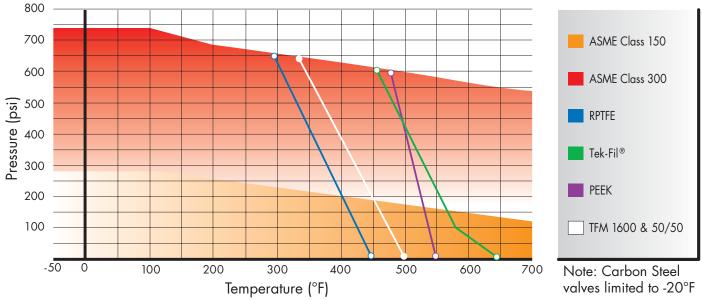

FIRE SAFE - Certified to API 607

Flow-Tek's Series RF15/RF30 valves with graphite stem packing meet the highest fire safety standards under extreme conditions. In the event of a fire, after heat destroys the primary resilient seat, the ball makes contact with the secondary metal seat, forming a secure seal.

Burned Seat Secondary Metal Seat Ball

PRESSURE / TEMPERATURE

Carbon Steel valves limited to -20°F

STEAM SERVICE PRESSURE RATINGS: WSP

	TFM	Seats	Tek-Fi	l Seats	PEEK	Seats
	PSI	°F	PSI	°F	PSI	°F
Class 150:	150	365	190	383	170	374
Class 300:	150	365	425	454	425	454

Vacuum Service to 29.9 inches Hg. gauge.

SEAT SELECTION

A wide range of seat materials are available to meet most applications. The standard seat is TFM 1600. Options include:

- RPTFE
- Stainless Steel/PTFE (50/50)
- UHMWPE
- Virgin PTFE
- PEEK
- Tek-Fil[®] (carbon/graphite filled TFM)

PEEK seats offer high pressure/temperature capability. Tek-Fil® seats offer reduced torque in high temperature, high cycle, and steam service applications. TFM 1600 seats offer the exceptional chemical resistance of PTFE plus lower porosity and permeability, improved temperature range and reduced valve torques.
